

# Raspberry Pi CM4 to CM3

**This board was designed and built by Geppetto**

Free automated documentation anytime.  
Design for free @ <https://geppetto.gumstix.com/>

No Minimum Order

Automated Supply Chain

Reduce Cost and Errors

**Thanks for using Geppetto to design this board!**

*One Stop Design-to-Order*

Simply place displays, sensors, processors, and Geppetto connects it all.  
No routing needed.

## Board Description

Uses Raspberry Pi CM4 Connector as its COM/processor.

Functional modules include:  
Raspberry Pi CM Builder

## Board Dimensions

6.75cm x 4.45cm

# 1 Modules on Board

## 1.1 Builders

### 1.1.1 Raspberry Pi CM Builder (v3) (1)

This is the Raspberry Pi Compute Module with sodimm connector pin for breaking out signals from a processor.

The RPI Compute Module Builder receives:

- HDMI from Raspberry Pi CM4 Connector (2)
- DSI0 from Raspberry Pi CM4 Connector (2)
- CAM0 from Raspberry Pi CM4 Connector (2)
- CAM1 from Raspberry Pi CM4 Connector (2)
- USB\_OTG from Raspberry Pi CM4 Connector (2)
- I2C1 from Raspberry Pi CM4 Connector (2)
- UART0 from Raspberry Pi CM4 Connector (2)
- GPIO16 from Raspberry Pi CM4 Connector (2)

The RPI Compute Module Builder provides the following outputs:

- VBAT to 5.0V Boost Converter (3)
- 3.3V to Top-side LED (5)

## 1.2 COM Connectors

### 1.2.1 Raspberry Pi CM4 Connector (v3) (2)

The **Raspberry Pi Compute Module 4 (RPCM4)** module contains two connectors to interface with the RPCM4 device. The RPCM4 COM connector is **ONLY** compatible with the RPCM4.

Technical details for the RPCM modules can be found at:

<https://www.raspberrypi.org/documentation/hardware/computemodule/datasheet.md>

It requires:

- 5.0V from Dummy Power Provider (4)

The Geppetto Pi Compute 4 connector provides the following outputs:

- HDMI0 to Raspberry Pi CM Builder (1)
- DSI0 to Raspberry Pi CM Builder (1)
- CAM0 to Raspberry Pi CM Builder (1)
- CAM1 to Raspberry Pi CM Builder (1)
- USB\_OTG to Raspberry Pi CM Builder (1)
- I2C.ID to Raspberry Pi CM Builder (1)
- UART0 to Raspberry Pi CM Builder (1)
- GPIO16 to Raspberry Pi CM Builder (1)
- SYS\_EN to Top-side LED (5)
- USB3\_CC1 to GPIO Expander over I2C (6)
- USB3\_CC2 to GPIO Expander over I2C (6)

## 1.3 Power

### 1.3.1 5.0V Boost Converter (v4) (3)

This DC to DC buck-boost converter provides a 5.0V DC output at 2A needed by certain components on this board. It is capable of accepting an input voltage between 1.5V to 5V DC and output is controlled by the Linear Technology LTC3533 buck-boost regulator.

It receives INPUT from Raspberry Pi CM Builder (1).

The datasheet for the LTC3533 converter is available at:

<http://www.analog.com/media/en/technical-documentation/data-sheets/3533fc.pdf>

No modules are connected to this converter.

### 1.3.2 Dummy Power Provider (v5) (4)

This module does nothing except as a means to satisfy power requirements in Geppetto web. THIS DOES NOT ACTUALLY PROVIDE POWER.

## 1.4 Lights and Switches

### 1.4.1 Top-side LED (v12) (5)

The top-side LED module contains a 1608 standard size LED of a user-selected color, mounted on the top side of a Geppetto board.

The LED is active-high on SYS.EN from Raspberry Pi CM4 Connector (2).

## 1.5 Converters

### 1.5.1 GPIO Expander over I2C (v6) (6)

The TCA6146A is a 16 channel GPIO expander using an I2C interface. The TCA6146A requires the following inputs:

- nINT from Raspberry Pi CM4 Connector (2)
- nRESET from Raspberry Pi CM4 Connector (2)
- LOGIC\_LEVEL from Dummy Power Provider (4)

## 2 Module Connections Graph

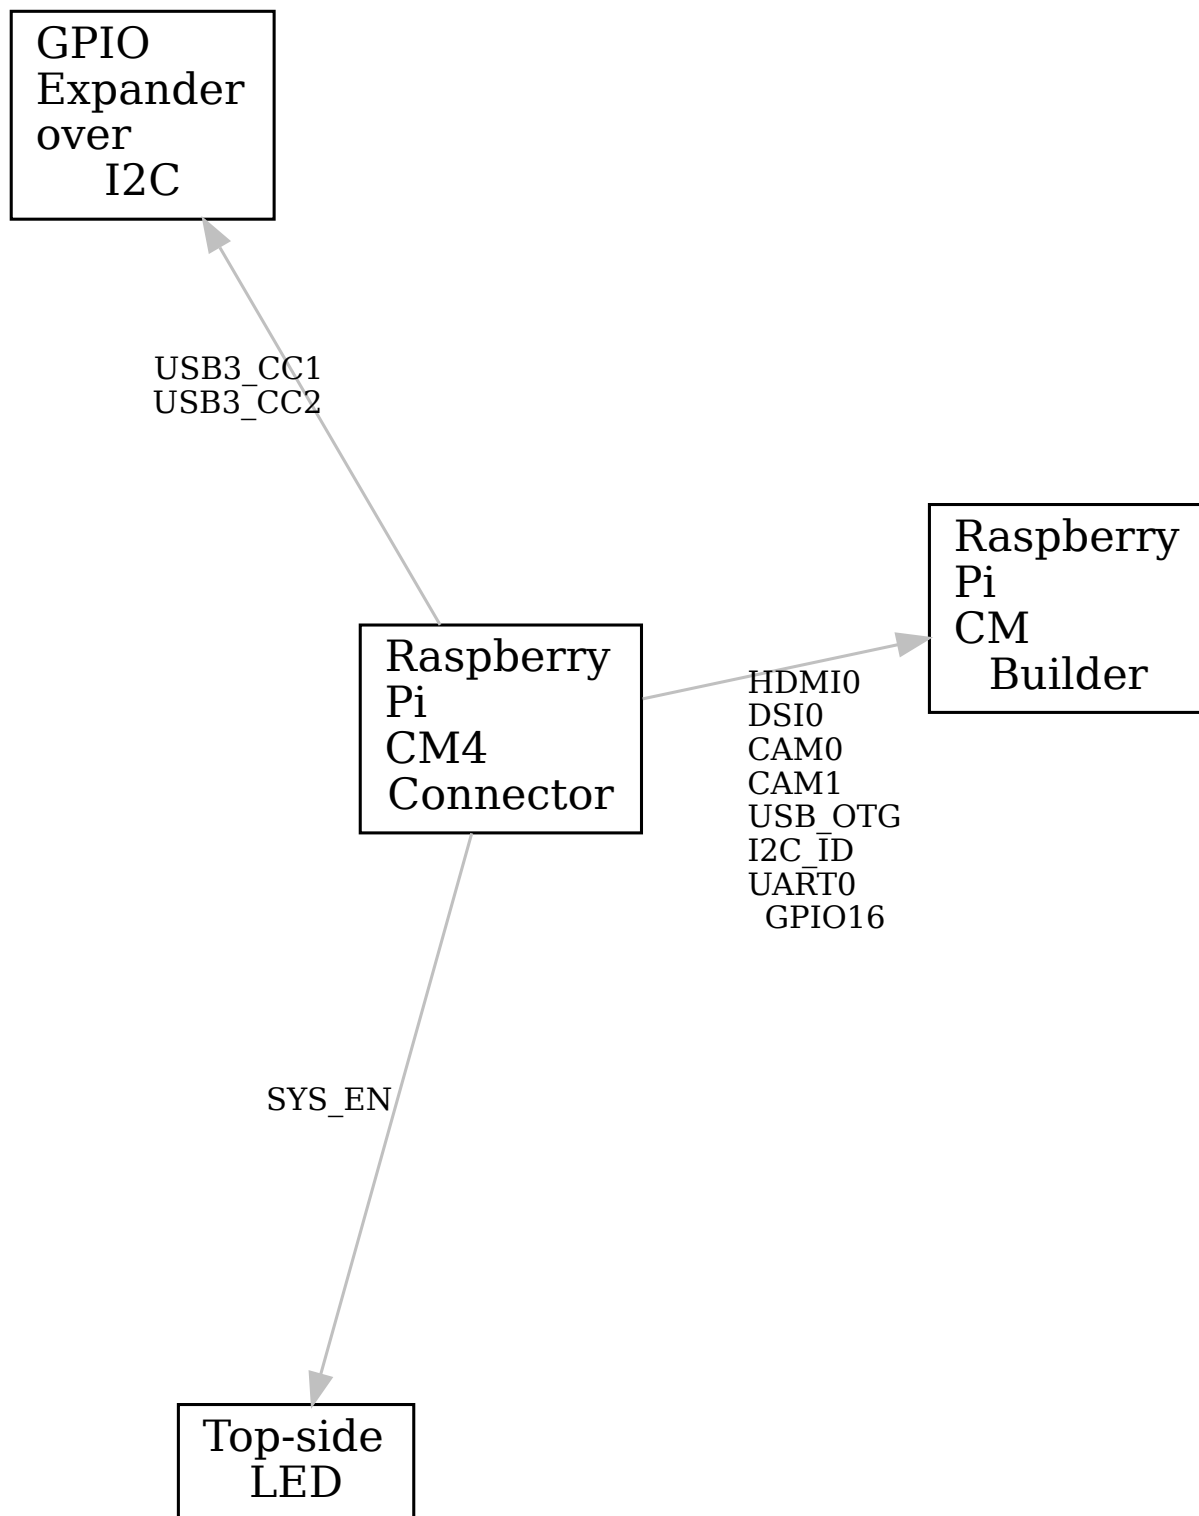

Figure 1: excludes power modules

### 3 Module Power Graph
